

## Performance Series Iaito

### Frequent Drawing Practice

These unedged training blades provide for safe drawing for the practitioner of the 450 year old art of Iaido. Forged from 400 series stainless steel the tempered blades are not only maintenance-free but more importantly provide the correct weight and balance needed for the rigors of repetitive drawing and sword motion practice. Each blade has a deeply cut groove (Bo-Hi) to provide audible feedback when swung properly.
